

EXPERIENCE THE EXCEPTIONAL

ENERGY POLICY

AESSEAL® manufactures a range of mechanical seals designed to help customers meet their environmental and safety obligations by preventing leakage of fluids and gases from rotating equipment. The Company's manufacturing activities are supported by a refurbishment service for mechanical seals.

The Company recognises the importance of energy efficiency issues and takes a holistic view of the impact of its activities in terms of energy consumption and the reliance on fossil fuels.

AESSEAL® is committed to the implementation of an Energy Management System in accordance with ISO 50001 that is appropriate to the energy use and consumption of the Company and in particular seeks to:

- Continually improve overall energy performance and endeavour to improve energy efficiency wherever possible.
- Comply with applicable legal & other requirements relating to energy.
- Provide the resources necessary to ensure energy data is available and enable objectives and targets to be achieved.
- Consider energy efficiency during specification and procurement of significant energy using equipment.

The Company's Integrated Management System (Q-SEAL) Manual describes the management system used to set objectives and control, review and improve energy performance and is implemented via procedures, work instructions and/or training, as appropriate. This manual, together with current objectives will be made available to interested parties on request.
