

EXPERIENCE THE EXCEPTIONAL

Mechanical Seal Support Systems Inspection and Recertification Services

Pressurised Mechanical seal support systems require periodic inspection in order for the operators to comply with the Pressure System Safety Regulations 2000 (PSSR) and to ensure ongoing site maintenance and safety standards. AESSEAL offer a comprehensive inspection and recertification service that includes a detailed safety specific examination of the pressure vessel and associated system components acting as your ‘competent person’ as part of your ‘written scheme of examination’.

The seal support system is fully inspected both internally and externally and subjected to a hydrostatic pressure test. ✓

The vessel is inspected for damage, corrosion, and all component parts are checked to ensure they operate correctly. ✓

Replacement of consumables and minor fittings are included as part of the service. ✓

A full written report of examination is provided including, where appropriate, recommendations for replacement of major components and instrumentation. ✓

Tailor made inspection plan to help customers comply with site safety standards and regulatory requirements. ✓

To minimise downtime AESSEAL can offer replacement systems as part on an ongoing inspection / recertification programme. ✓

Feature	Benefits
Expert inspection service	Peace of mind. Ensures user complies with the requirements of the Pressure System Safety Regulations 2000 (PSSR) as part of the ‘written scheme of examination’. AESSEAL will examine the seal support system as a ‘competent person’ within the intervals specified within the scheme.
Improved seal reliability	Continued efficient seal support system operation maximises mechanical seal life.
Minimise Downtime	Optional replacement systems as part of an ongoing inspection / recertification programme.
Tailor made plans	Meeting your own site specific requirements.
Written report and recommendations	Fully auditable ensuring compliance to PSSR.
